ABOUT ME

An enthusiastic and highly motivated Computer Science Engineering student. Skilled in Python, C, Java, HTML. Seeking an Internship opportunity to deepen my practical knowledge and technical expertise in a real-world industrial or research environment and aim to contribute positively to the organization's goals while continuously learning and growing as a future engineer.

EDUCATION

BE COMPUTER SCIENCE ENGINEERING

PSG Institute of Technology and Applied Research
2024 - Present

HSC

Sri Ramakrishna Martic Higher Secondary School
2023 - 2024
Marks Percentage: 95.2

SSLC

Sri Ramakrishna Martic Higher Secondary School
2021 - 2022
Marks Percentage: 95

SKILL

- C programming
- Python Programming
- Java Programming
- HTML
- Problem Solving
- Communication

ACTIVITIES

- Editor, Students' Union Multimedia Team
- Editing Lead, Itech Broadcast

ACHIEVEMENT

- Won First Prize in Science Project Expo at PSG ITECH

PROJECTS

DOMOTICS

This is a smart home prototype with integrated Gas sensor, Light Sensor, Keypad Security, Fire Sensor, Laser Security Locker System.

Airline Reservation System

Designed and developed a Java-based airline reservation system for booking and managing flight tickets Implemented features like ticket booking, cancellation, seat availability check, and passenger details management Used Object-Oriented Programming concepts such as classes, inheritance, and encapsulation Ensured efficient data handling using arrays/collections and file handling

Insure Scan

The project proposes an AI-based system that estimates the repair cost of a damaged vehicle using images. After an accident, a user captures photos of the damaged car through a mobile application. These images are analyzed using deep learning models to detect the damaged parts and determine the severity of the damage. Based on the identified damage and its severity, the system automatically calculates an estimated repair cost. This approach helps insurance companies speed up claim processing, reduce manual inspections, and provide quicker and more consistent damage assessments.

CERTIFICATIONS

- Python Programming at Hackerrank
- AI Tools and Prompt Engineering
- Linux Foundation at PSG Institute of Technology and Applied Research
- Arduino Programming at PSG Institute of Technology and Applied Research
- Web Design at freeCodeCamp
- Artificial Intelligence by IBM

EXPERIENCE

- Junior Software Developer in Software Development Cell (PSG ITECH) (Handling the Faculty Recruitment Portal.)

LANGUAGES

- Tamil
- English
